

AY: 2025-26

Class:	TE	Semester:	V
Course Code:	CSL502	Course Name:	Artificial Intelligence Lab

Name of Student:	Shravani Sandeep Raut
Roll No. :	51
Experiment No.:	7
Title of the Experiment:	Implement knowledge base in Prolog.
Date of Performance:	09/09/2025
Date of Submission:	16/09/2025

Evaluation

Performance Indicator	Max. Marks	Marks Obtained
Performance	5	
Understanding	5	
Journal work and timely submission	10	
Total	20	

Performance Indicator	Exceed Expectations (EE)	Meet Expectations (ME)	Below Expectations (BE)
Performance	4-5	2-3	1
Understanding	4-5	2-3	1
Journal work and timely submission	8-10	5-8	1-4

Checked by

Name of Faculty : Mrs. Rujuta Vartak

Date:

Aim: Implement knowledge base in Prolog.

Objective: To study and use AI programming language to create knowledge base.

Theory:

Prolog is a logic programming language. It has important role in artificial intelligence. Unlike many other programming languages, Prolog is intended primarily as a declarative programming language. In prolog, logic is expressed as relations (called as Facts and Rules). Core heart of prolog lies at the logic being applied. Formulation or Computation is carried out by running a query over these relations.

In prolog, We declare some facts. These facts constitute the Knowledge Base of the system.

We can query against the Knowledge Base. We get output as affirmative if our query is already in the knowledge Base or it is implied by Knowledge Base, otherwise we get output as negative. So, Knowledge Base can be considered similar to database, against which we can query. Prolog facts are expressed in definite pattern. Facts contain entities and their relation. Entities are written within the parenthesis separated by comma (,). Their relation is expressed at the start and outside the parenthesis. Every fact/rule ends with a dot (.)

Take any problem and represent the knowledge (facts) in prolog. Also you can use this for reasoning purpose.

SWI-Prolog offers a comprehensive free Prolog environment. Since its start in 1987, SWI-Prolog development has been driven by the needs of real world applications. SWI-Prolog is widely used in research and education as well as commercial applications.

SWI-Prolog, a free implementation of the programming language Prolog.

Susceptibility weighted imaging, in magnetic resonance imaging (MRI) used in medical contexts.

Logic programming languages, of which PROLOG (programming in logic) is the best known, state a program as a set of logical relations (e.g., a grandparent is the parent of a parent of someone). Such languages are similar to the SQL database language. A program is executed by an “inference engine” that answers a query by searching these relations systematically to make inferences that will answer a query. PROLOG has been used
